

# Make the most of your workday with the HP ZBook 8 G2a Mobile Workstation PC

## Handle visual work and everyday office tasks with the battery life to work from anywhere

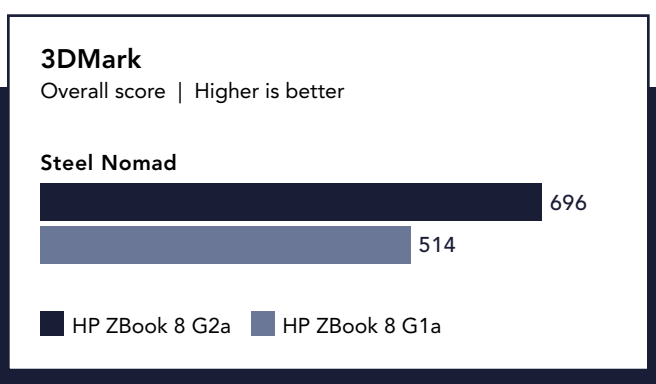
Compared to its predecessor, the HP ZBook 8 G2a delivered stronger performance for graphics and creative work, along with longer battery life

PT compared the latest HP ZBook 8 G2a, powered by an AMD Ryzen AI 9 HX PRO 470 processor, to its predecessor, the HP ZBook 8 G1a. The newer laptop led in 3D graphics, photo editing workflows, Microsoft 365 productivity, and battery life, which can mean smoother visuals, snappier everyday tasks, and more of your day unplugged.

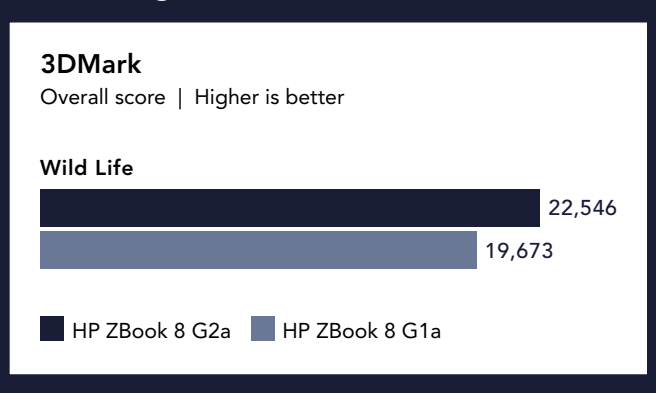
## Work with more responsive 3D graphics for a better user experience

Whether you need graphics power for everyday 3D visualization and modeling or for quick bursts of work, a higher score means more headroom before heavier models or scenes feel sluggish to navigate.

### 35.4% higher score



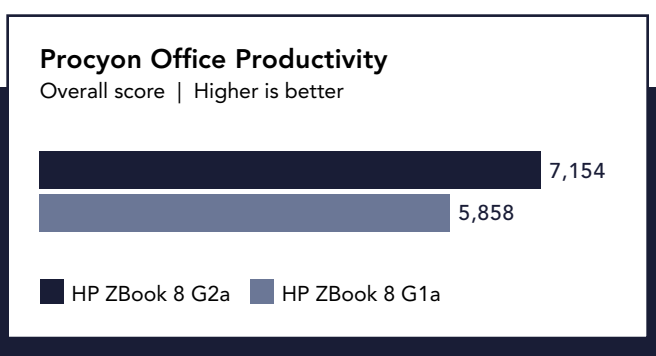
### 14.6% higher score

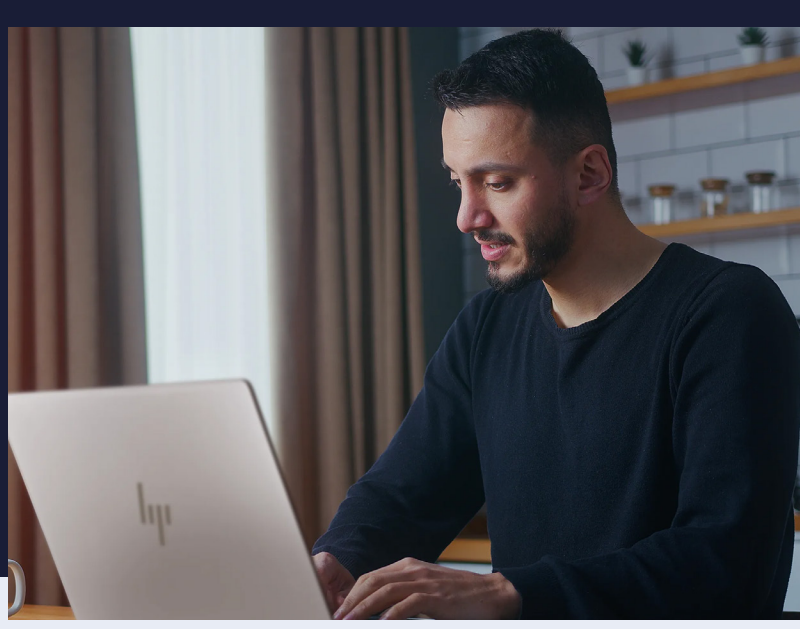


## Start your workday smoothly with faster office app performance

Higher scores indicate that everyday tasks finish faster, so the HP ZBook 8 G2a stays more responsive as you jump between a spreadsheet, a presentation, and a full inbox, and you get back to demanding work sooner.

### 22.1% higher score





## Work from wherever with longer battery life

The HP ZBook 8 G2a led in all three modes, whether you prioritize performance or battery life, including nearly 3 hours more in Best Power Efficiency Mode. This can mean landing after an international flight with power to spare, or getting through back-to-back client meetings and the commute home without ever plugging in.

### Up to ~3 hours longer battery life
